Summary

Third-year B.Tech CSE (Data Science) student at ABES Engineering College with hands-on experience building and shipping production web products. Intern and contributor at tryhosting.in, a web agency delivering websites for real clients, and builder of Quenaire, an AI-powered SaaS that automates security questionnaire responses using Retrieval-Augmented Generation (RAG). Comfortable across the stack, from client-facing web development to LLM-based applications, with a focus on turning ideas into working products quickly. click here.

Work Experience

Web Developer Intern-Tryhosting Technologies May 2026-July 2026

Completed a 2-month paid internship contributing to client website projects. Developed responsive pages and reusable frontend components, assisted with hosting, domain configuration and deployment, and fixed bugs and layout issues reported by clients. Worked on page speed and basic on-page SEO improvements, and collaborated with the team to deliver features within project deadlines.

Cloud Computing Intern - IBM August 2026 - Sept 2026

– Completed a 1-month cloud computing internship focused on core cloud concepts and hands-on work with IBM Cloud. Gained practical experience with cloud service models (IaaS, PaaS, SaaS), virtual servers, cloud storage and deploying web applications to the cloud. Explored containerization basics with Docker and learned about scalability, security and cost management in cloud environments through guided labs and a final project.

Projects

Quenaire – AI Security Questionnaire Automation Live Link

A SaaS platform that automatically drafts answers to security and compliance questionnaires using Retrieval-Augmented Generation (RAG). Company policy documents are stored as vector embeddings in PostgreSQL with pgvector, so the system retrieves the most relevant evidence for each question. Built the Spring Boot backend and a React frontend for uploading documents and reviewing generated answers.

JanVaani — AI-Assisted Civic Grievance Platform Link to Demo

Built a zero-backend civic grievance management platform (India Innovates 2026) using HTML, CSS, and JavaScript, featuring AI-driven complaint prioritization, automatic routing across 6 government depart ments, real-time ticket tracking without login, and multilingual support (English, Hindi, Kannada) — reducing simulated resolution time from 72+ hours to 36 hours with a 94 percent resolution rate.

Smart Attendance — Facial Expression Recognition for Engagement Tracking Link to Demo

Built a full-stack engagement analytics platform (Cloud Hackathon 2026) using Flask, MediaPipe, and a Hugging Face Vision Transformer model to detect faces and classify emotions from classroom photos in real time. Mapped emotional states to engagement levels (Focused vs. Distracted), stored results in Firebase Firestore, and built an analytics dashboard with Chart.js — all on a zero-cost cloud stack. Owned backend development, Firebase integration, and cloud architecture.

Education

2024 - 2028	Bachelor's Degree at **ABES Engineering College**	(GPA: 7.9/10.0)
2022	Class 12th CBSE Board	(Grades: 83.12 percent)
2021	Class 10th CBSE Board	(Grades: 98.1 percent)

Skills and Certifications

Web Developer	HTML, CSS, JavaScript, APIs, React
Java Spring Boot Development – EazyBytes (Udemy)	Covered Core Java, Spring Boot, Spring Data JPA, REST APIs, Spring Security and building production-ready backend applications.
Cloud Computing	AWS Academy Graduate- Cloud Foundations and Architect
